Re ITEM V (Novelty, inventive step, industrial applicability)

1 Novelty (Art. 33(2) PCT)

The subject-matter of <u>claims 1-13</u> has not been made available to the public by any of the available prior art documents and can therefore be regarded as novel.

2 Inventive step (Art. 33(3) PCT)

The subject-matter of <u>claims 1-13</u> can be regarded as meeting the requirements of Art. 33(3) PCT.

A process for the production of granules or pellets containing filamentous fungi comprising the step of adding a gelling agent through drop by drop contact with a solution containing a calcium salt has not been disclosed and cannot be derived from the available prior art in an obvious manner.

The problem of providing an alternative method for preparing granules containing filamentous fungi while ensuring their stability and viability over long periods of time has been solved in an inventive manner. The present method does also not require a a complex and expensive apparatus, including a tumbling granulator, as for instance disclosed in **D2**.
